Model: UTV-65-7-PRO (5303071)  
(65 Gallon Lawn & Garden UTV Sprayer w/7-Nozzle Boom)

Professional Grade Pump (4.0 GPM):  
Ideal for Harsh Chemicals & Oil Based Chemicals with Surfactants

Long Range 13" PRO SERIES Handgun  
38' Horizontal Spray & 27' Vertical

Roundup® Ready

Technical Specifications
- 65 Gal. Corrosion-Resistant Polyethylene Tank  
- 13" Pro Series Handgun w/25 Ft. Handgun Hose  
- 7-Nozzle Boom Assembly (140” Spray Coverage)  
- Drift Reducing Corrosion-Resistant Nozzles w/"No-Drip" Check Valve Strainers  
- Adjustable Boom Height  
- Pro Series 4.0 GPM, 45 PSI, 12 Volt Pump  
- Multi-Lid to accurately measure and pour chemicals

General Information
Thank you for purchasing this product. The purpose of this manual is to assist you in operating and maintaining your UTV sprayer.

WARNING: To reduce the risk of injury, the user must read and understand the operator’s manual before using this product.

WARNING: Cancer and Reproductive Harm  
www.P65Warnings.ca.gov

Assembly Instructions
The sprayer is partially assembled at the factory.

Follow the assembly instructions on page 2 and hook up the wiring to an existing 12 volt power source to complete your sprayer. 
Connect the electrical hook-up to the end of your pump and clip the clips to a fully charged battery.

Read the operating instructions and then run the sprayer using only water for testing. When everything tests all right, add the desired chemical mixture and water combination and start the spraying operation.

***IMPORTANT REMINDER***

This sprayer comes with an On/Off valve located on your intake line. You must make sure the valve is in the “open” position before using your sprayer.

Retain a copy of your receipt for your unit, as it will be required to validate any warranty service.

Warranted against manufacturer or workmanship defects from date of purchase with copy of receipt:  
Homeowner Usage: One Year.  
Commercial Usage: 90 Days.

[5195263 (06/19)]
Attach the Hose Bracket to the top of the tank with (4) Phillips Head Screws and insert the (2) Grommets into the hose bracket.

Thread Pressure Gauge into open port on manifold., as shown.

Thread Multi-Lid on to tank.

Slide the boom clamps up the boom mount tubes and install the 1/4" carriage bolt and Lobe Knob., make sure the boom clamps are installed with the square carriage bolt holes or two boom mount holes to the inside and the lobe knob to the outside.

Using the square U-bolts and nuts, attach the boom to the boom clamps.

Finally attach boom hose. Slip (2) 3/8" hose clamps onto hose. Attach one end of hose to the boom and the other end to the manifold. The boom hose can be cut to length if needed.

Once fully assembled, to remove the sprayer from a UTV Box, disconnect the boom supply hose from the manifold, using the quick connect fitting. Then loosen the two lobe knobs on the tank mounts and slide the boom out and set aside. Then the tank can be removed and set on the ground without damaging the tank or boom. The handles can be used to lift the empty tank in and out of the box. Tie down straps (NOT INCLUDED) can be installed through the handles to secure the tank.
**IMPORTANT:** Remove tank lid and be sure the tank is clean and free of any foreign material. Rinse tank out of any tank residue before filling with water to test.

**Testing the Sprayer**

**NOTE:**
It is VERY important for you to test your sprayer with plain water before actual spraying is attempted. This will enable you to check the sprayer for leaks without the possibility of losing any expensive chemicals.

Fill the tank about 1/2 full with plain water and drive to the starting place for spraying.

When you are ready to spray, turn the boom valve to the “on” position (Detail A). This will start solution spraying from the tips of the boom. The pressure will decrease slightly when the boom is spraying.

Adjust the pressure by turning the “ON/OFF” valve lever on the bypass line valve (Detail B). Make sure your pattern is sufficient. You may down-pressure the system by ‘bypassing’ solution back into the tank. This is achieved by opening the bypass valve. Regulating pressure is done in this manner.

Read the operating instructions and initially begin spraying by closing the ‘Pressure Adjust’ valve and opening the boom line valve (Detail A). This will enable the air in the line to be eliminated (purged) through all the tips, while building pressure. When everything tests all right (no leaks and good pressure), add the desired chemicals to the mixture and water combination and start your spraying operation. Adjust the pressure and spray as you did in the testing procedure.

Conditions of weather and terrain must be considered when setting the sprayer. Do not spray on windy days. Protective clothing must be worn in some cases.

**Be sure to read the chemical label(s) before application!**

**Operation**

The pumping system draws solution from the tank, through the strainer and to the pump. The pump forces the solution under pressure to the handgun or boom nozzles.

Connect the lead wire to a fully charged 12 volt battery. You may use either a stand-alone battery or the battery on your towing vehicle. Connect to the positive (red) terminal first, then connect to the negative (black) terminal. Then connect the end of the lead wire to the end of the pump wire from the lead wire, then disconnect the negative (black) connection and finally the positive (red) connection. The lead wire has an On/Off switch to activate the pump. “-” is on and “O” is off.

Fill the tank part way with water and then add the desired amount of chemical to be sprayed. Finish filling tank to proper level. Turn the pump on and by depressing the “-” side of the rock-er switch. The pump is equipped with a pressure switch that is pre-set at the factory to shut the pump off when all discharges are closed.

The pump will turn back on when one of the following actions occurs:

- Handgun lever is squeezed to spray the handgun.
- Boom valve is opened to broadcast spray with the boom.
- Bypass valve is opened to re-circulate solution back into the tank.

When spraying with either the boom or the handgun, pressure may be reduced by slowly opening the bypass valve until desired pressure is achieved. Opening the valve decreases pressure, closing the valve increases pressure. When spraying with the boom, the proper method to set the pressure is to open the boom valve completely and if a lower pressure is desired, then slowly open the bypass valve until that pressure is obtained.

For the safest and most efficient chemical application, you will need to calibrate your sprayer using the tip and speed charts. Once you have determined the proper speed and pressure settings, you will need to consult your chemical label for the amount of chemical to be added to the tank. Read the entire label. Use only according to label directions.

**Calibration**

Chemical labels may show application rates in gallons per acre, gallons per 1000 square feet or gallons per 100 square feet. You will note that the tip chart shows 2 of these rating systems. Once you know how much you are going to spray, then determine (from the tip chart) the spraying pressure (PSI), and the spraying speed (MPH).

Determining the proper speed of the pulling vehicle can be done by marking off 100, 200 & 300 feet. The speed chart indicates the number of seconds it takes to travel the distances. Set the throttle and with a running start, travel the distances. Adjust the throttle until you travel the distances in the number of seconds indicated by the speed chart. Once you have reached the throttle setting needed, mark the throttle location so you can stop and go again, returning to the same speed.

Add water and proper amount of chemical to the tank and drive to the starting place for spraying.
Using the Boom Nozzles

Four things must be considered before spraying with the boom.

1. How much chemical must be mixed in the tank.
2. Rate of spray (gallons per acre to be sprayed).
3. What pressure (p.s.i.) will be used.
4. Speed traveled (mph) while spraying.
   * Refer to the chemical label to determine your chemical mixture
   * See the tip chart to determine the pressure to be used. The chart will also show the speed used when spraying.
   * Start the pump and open the valve to the boom nozzles.
   * Check the spray pattern. Usually you can see the coverage better on a solid concrete surface, such as a driveway.

Maintenance During/After Spraying

Periodically check the strainer and clean the screen on your intake line. Proper care and maintenance will prolong the life of your sprayer.

After use, drain the tank and store or dispose of chemical properly. Fill the sprayer half way with clean water. Start the pump and allow the water to pump through the entire plumbing system and nozzles. Drain and then refill half full, add the recommended amount of a good quality tank cleaner, such as FIMCO Tank Neutralizer and Cleaner. (If no tank cleaner is available, you may substitute dish soap for this step, about 1-2 oz. per gallon). Turn pump on and circulate through system for 15 minutes and then spray out through boom and handgun nozzles. Refill sprayer half way with clean water and repeat. Follow the chemical manufacturer’s disposal instructions of all wash or rinsing water.

If boom or handgun nozzles need cleaning, remove them from the sprayer and soak in warm soapy water. Clean with a soft bristled brush or toothpick if necessary. Never use a metal object. Even the slightest damage can change the flow rate and spray distribution. Water rinse and dry the tips before storing.

WARNING: Some chemicals will damage the pump valves if allowed to soak untreated for a length of time! ALWAYS flush the pump as instructed after each use. DO NOT allow chemicals to sit in the pump for extended times of idleness. Follow the chemical manufacturer’s instructions on disposal of all waste water from the sprayer.

Winter Storage

Prepare the sprayer for end-of-season storage by running RV antifreeze through the system. This will keep internal parts lubricated, protect against corrosion and keep the unit from freezing. Note: RV antifreeze is non-toxic and biodegradable and generally safer for the environment than automotive antifreeze.

Before storing your sprayer for winter or long term storage, thoroughly clean and drain it as much as possible. Then pour enough pink RV antifreeze into the tank so that when the pump is turned on you can pump the antifreeze throughout the entire plumbing system, including the bypass. Make sure to operate the boom and handgun until you see pink fluid spraying from the nozzles. Leave any remaining antifreeze in the tank. Before your next usage, rinse the antifreeze from the sprayer with clean water. It is nearly impossible to drain all of the water from the sprayer and any trapped water can freeze in cold weather and damage parts of the sprayer. Pumping the antifreeze through the system will displace the water and help prevent this damage.

Removing from storage: drain the antifreeze. Fill the tank with fresh water and run through the system. Dispose of antifreeze and flush water properly.

There is a shut-off valve on the intake line. It is at this location so you can shut off the flow of solution to access your system’s filter screen for cleaning.

Checking/Cleaning the sprayer’s filter/screen:

* Start your pump and before it shuts off, reach down and shut the valve to the ‘Closed’ position (lever is perpendicular to the flow of fluid), then shut off your pump.
* Unscrew the bowl of the filter to access the screen.
* Remove the screen and clean as necessary. Replace when done and reassemble the entire assembly.
* Make sure the valve is turned to the ‘Open’ position before restarting your pump.

Long Range Pro Series Handgun

* No Drip Shut Off
* Easy Pull Trigger Handle
* Chemical Resistant Construction
* 38’ Horizontal Throw & 27’ Vertical Throw

To adjust the spray pattern, the nut needs to be adjusted (Ref. A). Spinning it off, towards the lever, will make a cone pattern and spinning it on, away from the lever, will make a stream. The lever (Ref. B), is the lock that can be used to lock the lever when pulled, holding the valve open. Squeezing the trigger, will release the lock.
DO

• Clean and rinse your pump after each use with Fimco Tank Neutralizer
• Winterize your pump or sprayer by rinsing, draining and running RV Antifreeze through it before storing for the winter.
• Use clean water for your spray mixture
• Store inside a building when not in use.

DON’T

• Use to pump bleach.
• Use to pump petroleum products such as diesel fuel, gasoline or kerosene
• Leave your pump sit with spray mixture in it for extended periods
• Use dirty or unfiltered water for spraying

Troubleshooting the Pump:

Motor does not run:
• Check for loose wiring connection(s).
• Make sure the ‘ON/OFF’ switch in the lead wire assembly is in the ‘ON’ position. “I” is the ‘ON’ position and ‘O’ is the ‘OFF’ position.
• Check for defective pressure switch. Make sure you are connected to a good 12 volt power source. Make sure any on/off switches are in the ‘on’ position. Pull both wires out of their connections, using a needle nose pliers if needed, and using a piece of wire, short the two wires together. If your pump runs when you do this, your pressure switch will need to be replaced.
• Check the fuse.
• Check for low voltage at the power supply.

Pump does not prime:
• Check for air leaks in supply line.
• Check for debris in the check valve assembly.
• Check for defective check valve.
• Check for clogged strainer/filter.
• Check for cracks in the pump housing.
• Check for empty product supply.

Low Pressure/Low Flow:
• Check for leaks in the discharge line.
• Check for restriction in the discharge line.
• Check for debris in nozzle orifice.
• Check for clogged strainer.
• Check for proper voltage—try another 12-volt battery.

Pulsating flow (surging):
• Low flow may cause pump to surge.
• Spray wand is adjusted for a small or fine spray pattern.
• Slightly open bypass (if applicable) to overcome.
• If needed, pressure switch may need to be adjusted—adjust a quarter turn at a time clockwise until surging stops.
• Check for defective pressure switch.
• Check for leaks in the discharge line.
• Check for restriction in the discharge line.
• Check for debris in nozzle orifice.
• Discharge hose may be too long.
• Check for clogged strainer.

Motor continues to run after discharge is shut off:
• Check for empty product supply.
• Check for open bypass valve. (if equipped)
• Check for low voltage.
• Check for leak in discharge line.
• Check for defective pressure switch.
• System has leaks.

Fuse blows:
• Excessive voltage.
• Improper adjustment of pressure switch.
• Damaged or defective wiring harness.
• Half-moon & counterweight are sticking.

Troubleshooting a leaking quick connect elbow:

- Look inside the cap, you'll see a hexagon shape behind the flat washer, using an allen wrench, head of a bolt or a flat head screwdriver, something just big enough to catch the edges, and while holding the elbow and cap, give it a snug twist clockwise to tighten.
- The elbow is a two-piece interlocking mechanism and if loose, will leak.

Manifold Detail (5278714)

Manifold Assembly Detail

Boom (5278715)

Strainer (5116417)
7-Nozzle (Standard) Boom Assembly
(with 3/8" Hose, 1" Sq. Tubing & AIXR11002VP Tips)

Opposite Side has Typical Hardware Setup

See Hinge Detail

Based on the minimum overlap required to obtain uniform distribution with 110° tips and 20° spacing.
Suggested Minimum Spray Height: 16"-18" above what is being sprayed (to plant, not ground).
Optimum Spray Height: 20"

- 110° wide, tapered flat spray angle with air induction technology for better drift management
- Made of 2-piece UHMWPE polymer construction which provides excellent chemical resistance, including acids, as well as exceptional wear life
- Compact size to prevent tip damage
- Excellent for systemic products and drift management
Multi-Lid Directions

1. Open fill cap and place garden hose into tank. Fill tank to desired gallon marker, if marker is above the bottom of calibration container, stop before water reaches calibration container. This is done to help chemical mix better and keep foaming of chemical to a minimum later.

2. Remove Multi-Lid and use calibration container to measure the correct amount of chemical for the water being used.

3. Pour chemical into tank and tighten Multi-Lid back onto tank. If desired amount of water was added in step 1, you are done. Be sure to press firmly on fill cap to seal with Multi-Lid. If desired amount of water was not met in step 1, proceed to step 4.

4. Open fill cap and place garden hose into tank. Add water to the desired gallon marker. Close fill cap, pressing firmly to seal cap to Multi-Lid.

NOTE: If water and chemical has not mixed properly, use the pressure adjustment control on the manifold to recirculate the mixture through tank.

Technical Specifications

- Properly secure the tank to your utility vehicle, using tie-down or ratchet straps (Not Included).
- Tank straps may be installed through the handles to help prevent straps from slipping off tank if too loose.
- Handles can be used to lift the empty tank in and out of the box.
- Stay within your utility vehicle’s weight limits. This unit when filled with water weighs approx.: 650 lbs. Consult the owner’s manual for your vehicle.
LIMITED WARRANTY FOR NEW FIMCO, IND. EQUIPMENT

WHO MAY USE THIS LIMITED WARRANTY. This limited warranty (the “Limited Warranty”) is provided by Fimco, Ind. to the original purchaser (“you”) of the Equipment (as defined below) from Fimco, Ind. or one of Fimco, Ind.’s authorized dealers. This Limited Warranty does not apply to any subsequent owner or other transferee of the Equipment. THIS LIMITED WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, AND YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE.

WHAT THIS LIMITED WARRANTY COVERS AND FOR HOW LONG. Fimco, Ind. warrants that any new Equipment will be free from defects in material and workmanship for a period of one (1) year for homeowner, 90 days for commercial user, after delivery of the Equipment to you (the “Warranty Period”). The Warranty Period is not extended if Fimco, Ind. repairs or replaces the Equipment.

WHAT IS NOT COVERED BY THIS LIMITED WARRANTY. This Limited Warranty does not apply to: (1) used Equipment; (2) any Equipment that has been altered, changed, repaired or treated since its delivery to you, other than by Fimco, Ind. or its authorized dealers; (3) damage or depreciation due to normal wear and tear; (4) defects or damage due to failure to follow Fimco, Ind.’s operator’s manual, specifications or other written instructions, or improper storage, operation, maintenance, application or installation of parts; (5) defects or damage due to misuse, accident or neglect, “acts of God” or other events beyond Fimco, Ind.’s reasonable control; (6) accessories, attachments, tools or parts that were not manufactured by Fimco, Ind., whether or not sold or operated with the Equipment; or (7) rubber parts, such as tires, hoses and grommets.

HOW TO OBTAIN WARRANTY SERVICE. To obtain warranty service under this Limited Warranty, you must (1) provide written notice to Fimco, Ind. of the defect during the Warranty Period and within thirty (30) days after the defect becomes apparent or the repair becomes necessary, at the following address: Fimco, Ind., 1000 Fimco Lane, North Sioux City, SD 57049; and (2) make the Equipment available to Fimco, Ind. or an authorized dealer within a reasonable period of time. For more information about this Limited Warranty, please call: 800-831-0027.

WHAT REMEDIES ARE AVAILABLE UNDER THIS LIMITED WARRANTY. If the conditions set forth above are fulfilled and the Equipment or any part thereof is found to be defective, Fimco, Ind. shall, at its own cost, and at its option, either repair or replace the defective Equipment or part. Fimco, Ind. will pay for shipping and handling fees to return the repaired or replacement Equipment or part to you.

LIMITATION OF IMPLIED WARRANTIES AND OTHER REMEDIES. THE REMEDIES DESCRIBED ABOVE ARE YOUR SOLE AND EXCLUSIVE REMEDIES, AND FIMCO, IND.’S SOLE LIABILITY, FOR ANY BREACH OF THIS LIMITED WARRANTY. TO THE EXTENT APPLICABLE, ANY IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, SHALL BE LIMITED IN DURATION TO THE WARRANTY PERIOD, AND THE REMEDIES AVAILABLE FOR BREACH THEREOF SHALL BE LIMITED TO THE REMEDIES AVAILABLE UNDER THIS EXPRESS LIMITED WARRANTY. SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU. IN NO EVENT SHALL FIMCO, IND.’S LIABILITY UNDER THIS LIMITED WARRANTY EXCEED THE ACTUAL AMOUNT PAID BY YOU FOR THE DEFECTIVE EQUIPMENT, NOR SHALL FIMCO, IND. BE LIABLE, UNDER ANY CIRCUMSTANCES, FOR ANY CONSEQUENTIAL, INCIDENTAL, SPECIAL OR PUNITIVE DAMAGES OR LOSSES, WHETHER DIRECT OR INDIRECT. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU.
